

Assignment (Session – 5)

Theory Type :

- 1.) Explain the result of the following operation using binary representation. Show both numbers in binary and explain why the final answer is obtained.

- 2.) List the properties of the XOR (^) operator discussed in today's session.
- 3.) Perform Xor, And, Or operation on given data : *(On Paper)*
 - 2 , 5
 - 7, 9
 - 14, 21
- 4.) Why does the expression (n & 1) help in checking whether a number is even or odd? Explain using binary representation of even and odd numbers.

Coding Type :

- 1.) Check whether a number is Even or Odd *(Perform this on a C compiler)*
