

Assignment (Session – 2)

1.) Write a program to calculate the **Area of Square**

Instructions :

- The formula for the area of a square is **Area = side × side**
- Take the value of the side as input from the user.
- Calculate the area using the formula.
- Display the calculated area on the terminal.

Output must look like this :

```
Enter the side of the square: 5
Area of the square = 25
```

2.) Write a program to calculate the **Area of a Circle**

Instructions :

- The formula for the area of a circle is: **Area = $\pi \times r \times r$** (use $\pi = 3.14$)
- Take the value of the radius as input from the user.
- Calculate the area using the formula.
- Display the calculated area on the terminal.

Output must look like this :

```
Enter the radius of the circle: 5
Area of the circle = 78.50
```

Happy Coding!!
