

Practice Problems :

1.) Write a program to check whether an **entered character is a vowel or a consonant**.

(Use If else)

- Take a single character as input from the user.
- Check whether the entered character is a vowel (a, e, i, o, u in both uppercase and lowercase).
- If it is a vowel, print "**Vowel**".
- Otherwise, print "**Consonant**".

```
Input
less
Enter a character: b

Output
nginx
Consonant
```

```
Input
less
Enter a character: a

Output
nginx
Vowel
```

2.) Write a program to take **two numbers** as input from the user.

- (Use If - else if – else)
- determine which number is larger.
- If both numbers are equal print “Equal”.

```
Input
sql
Enter first number: 10
Enter second number: 25

Output
csharp
25 is the larger number
```

3.) Write a program to take **three numbers** as input from the user.

- (Use If – else if – else)

- Find the greatest among them and display the largest value.

- If all three numbers are equal, print that all numbers are the equal.

```
Enter first number: 10
Enter second number: 25
Enter third number: 15

25 is the greatest number.
```

```
Enter first number: 40
Enter second number: 18
Enter third number: 32

40 is the greatest number.
```

```
Enter first number: 20
Enter second number: 20
Enter third number: 20

All numbers are equal.
```
